# Equity markets in the fiscal year through December 31, 2010

#### Price increase despite occasional doubts regarding economic prospects

During the fiscal year from the start of January through the end of December 2010, prices in the international equity markets increased amid temporarily strong fluctuations. Following the severe financial and economic crisis, the global economy was able to further regain stability, though high budgetary deficits, in particular those of the Southern European countries and Ireland, fanned fears of an escalation at times and led to major corrections on the exchanges. Equity prices received support however from the solid profitability of many companies, which benefited as much from the economic dynamism in the high-growth emerging markets as they did from their own cost-saving and profitability-increasing measures. The low interest rate policy of the central banks also boosted prices. Adhering to this expansive liquidity supply created a high level of trust in an economic recovery. This was also true of the 750 billion euro protective shield that the European Union and the International Monetary Fund put up to defuse the debt crisis in Europe. Against this backdrop, the MSCI World Index recorded an increase of 21.1% in euro terms over the 12-month period (+11.8% in U.S. dollars).

In many cases, the equities of companies with a global orientation led this upward trend. This included commodities as well as industrials, such as suppliers of machinery and equipment for infrastructure development in the emerging-market countries. The improvement in the overall economic climate also triggered a shift in focus to technology and consumer stocks.

In the 12 months through the end of December 2010, the U.S. equity markets put in a positive performance overall. This was due initially to more positive economic data and an improvement in corporate operating results. As time progressed, however, signs of a weakening of the economic recovery along with the debt crisis in Europe had an at times adverse effect, amid fears of negative fallout for economic performance in North America. The situation on the employment and real estate markets also remained tense. In addition, there was temporary uncertainty regarding the future monetary policy of the U.S. Federal Reserve. Following the Fed's decision to continue the purchase of government bonds to stabilize the economy, the equity markets rose again sharply, with the S&P 500 gaining 13.9% for the entire reporting period in U.S. dollar terms (+23.4% in euro).

Europe presented a divided picture. The economy in Germany and in the Northern European countries was in comparatively good condition. The markets were buoyed here by the excellent international competitiveness of many companies. For example, the DAX gained 16.1% in euro terms. Germany's above-average growth in comparison to its Western European neighbors was not due entirely to its traditionally strong export business (which additionally benefited from the weakness of the euro) but was also increasingly attributable to the recovery in domestic demand. The comparatively solid man-

Performance in %

#### Equity indices

Germany: DAX – Europe: STOXX Europe 50 – U.S.: S&P 500 – Japan: TOPIX – worldwide: MSCI World – Emerging markets: MSCI Emerging Markets

agement of the state budget also had a positive effect. The equity markets in countries such as Greece, Ireland, Spain and Portugal remained at markedly low levels due to continued doubts about their financial stability and the associated concerns regarding growth. This was also a critical contributing factor to the 2.4% decline on the EURO STOXX 50 index in euro terms – in comparison to the broader STOXX Europe 50 index, which rose 4.0%. The prices on most **Eastern European** exchanges improved tangibly on the back of strong growth in these countries and the comparatively low level of government debt. In the reporting period, for example, Poland recorded an increase of 24.0% (WIG) and the Czech Republic was up 14.0% (PX index; both percentages in euro terms).

In contrast, Japanese stocks performed less positively. The more favorable market environment which initially accompanied an improvement in economic data and company results clouded over again as the months passed. The strength of the yen against the U.S. dollar hurt performance because of the resulting negative impact on the export-oriented Japanese economy. Even the intervention of the central bank in the currency market only managed to curb the appreciation of the yen temporarily. As measured by the TOPIX index, Japanese equities recorded a gain of just 1.0% in local currency during the fiscal year through the end of December 2010 (+23.7% in euro terms).

#### Solid fundamental data in the emerging markets

The emerging-market countries yielded very robust economic data in the reporting period. The overall market environment was marked by sustained economic growth, structural improvements and the continued reform of fiscal policy. In China, India and Brazil, but also in many other countries, private consumer spending gained in importance as a source of growth, accompanied by the strong performance of the services sector. Against this backdrop, the MSCI Emerging Markets recorded a strong gain of 29.7% in euro terms. The performance of the individual markets in the emerging-market countries displayed a similar volatility to those in the industrial countries. In some markets, however, a marked increase was recorded along with new annual highs. In addition to the globally higher risk appetite on the part of equity investors, which led to the building up of significant positions in the emerging markets, dynamic economic growth was one of the reasons for this overall positive performance. The capital markets' only concern recently has been rising inflation rates, particularly in China and Brazil. The equity markets in China and Brazil recovered comparatively quickly from the lows they hit during the financial crisis in fall 2008, and - with valuations having already approached their pre-financial crisis levels - the performance of both of these markets was significantly more restrained in 2010, despite a positive overall environment. The Hang Seng China Enterprises index gained 0.4% in local currency (+8.5% in euro). The Brazil Bovespa gained 1.0% in Brazilian real (+13.7% in euro). Compared to this, the performances in 2010 of the Bombay SE 30 Share Sensitive (+17.6% in Indian rupee; +32.6% in euro) and Russia's RTS (+25.4% in Russian rouble: +34.4% in euro) were considerably better.

### Continued increase in the price of gold and crude oil

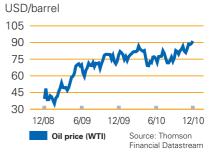

The price for a troy ounce of **gold** reached new historic highs in 2010, at

### Development of the euro against the U.S. dollar

### Change in oil price since the end of 2008

times rising above the 1,400 U.S. dollar mark. The precious metal was supported by the very expansive monetary policy of leading central banks as a result of the financial crisis as well as high government debt in the euro area peripheral countries; both of these factors contributed to strong investor demand. The increasingly robust global economy, strong growth in the emergingmarket countries and - toward the end of the reporting period - belowaverage winter temperatures in North America and Europe pushed the price of crude oil significantly above 90 U.S. dollars per barrel at times.

### **General information**

The fund described in this report is a sub-fund of a SICAV (Société d'Investissement à Capital Variable) incorporated under Luxembourg law.

#### Performance

The investment return, or performance, of a mutual fund investment is measured by the change in value of the fund's shares. The net asset values per share (= redemption prices) with the addition of intervening distributions, which are, for example, reinvested free of charge within the scope of investment accounts at DWS, are used as the basis for calculating the value. Past performance is not a guide to future results. The corresponding benchmarks – if available – are also presented in the report. All financial data in this publication is **as of December 31, 2010.** The deadline for completing the text portions of the report was January 31, 2011.

#### **Sales prospectuses**

Fund shares are purchased on the basis of the current simplified and full sales prospectuses and the by-laws of the SICAV, in combination with the latest audited annual report and any semiannual report that is more recent than the latest annual report.

#### Issue and redemption prices

The current issue and redemption prices and all other information for shareholders may be requested at any time at the registered office of the Management Company and from the paying agents. In addition, the issue and redemption prices are published in every country of distribution through appropriate media (such as the Internet, electronic information systems, newspapers, etc.).

## **Annual report**

### **FPM Funds Stockpicker Germany All Cap**

### Investment objective and performance in the reporting period

FPM Funds Stockpicker Germany All Cap focused on the entire German equity market. The sub-fund preferred equities of companies with aboveaverage earnings capacity and a comparably low dependency on general economic performance.

In the fiscal year through the end of December 2010, the sub-fund achieved a significant appreciation of 23.8% per share (BVI method) thanks to the solid economic performance in Germany. Investor focus again shifted in particular to stocks with small and medium market capitalizations, which exhibited price increases that were many times above average, while large stocks, with the exception of more economicallysensitive, cyclical companies, lagged somewhat behind in comparison.

### Investment policy in the reporting period

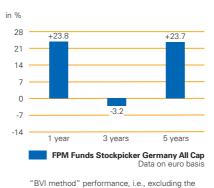

Significant price gains were achieved with equities of companies whose business development was impacted considerably less than expected by the financial crisis and which, in some cases, recorded extremely strong operating profits. Among the large positions, these were Software AG, the construction materials manufacturer Sto and Aareal Bank, which was noticeably better positioned than its competitors. The medical technology company Eckert & Ziegler also recorded very good corporate earnings, which was reflected in its share price.

#### FPM FUNDS STOCKPICKER GERMANY ALL CAP Five-year performance

"BVI method" performance, i.e., excluding the initial sales charge. Past performance is no guide to future results. As of: December 31, 2010

by method performance, i.e., excluding the initial sales charge. Past performance is no guide to future results. As of: December 31, 2010

Some of the companies newly represented in the fund included Wacker Chemie (due to the continued considerable growth prospects for solar wafers), Bilfinger Berger (after its focus on service business), Axel Springer (due to its strong position in digital media), and Volkswagen (which – compared to the past – became far better positioned in the global automotive markets in the interim). The sub-fund also invested in Infineon for the first time, following its successful restructuring. A position was also established in Elmos, an automotive supplier in the semiconductor sector, which profited from the globally increased demand for vehicles. In addition, the focus was once again placed on the port operator Eurokai; this move was supported by growing global trade. As part of a capital increase, the common stock of the medical technology company Dräger, which was listed on the stock exchange for the first time, was subscribed and it traded at a considerable discount compared to the preferred stock. All new investments were characterized not only by solid business prospects but also by low valuations.

Positions were sold primarily to enter into more promising investments. This was the case in the sale of Münchener Rück, Bayer, Südzucker and Deutsche Postbank. The management accepted a compensation offer from the security card manufacturer Smartrac. Due to high valuations, shares of the engineering service provider Bertrandt were sold and the position in the medical technology company Stratec was reduced. As a result of missed business targets, the sub-fund sold off shares of the automotive supplier twintec and of the telecommunications provider GoYellow Media.

Net asset

### Changes in net assets and in the net asset value per share over the last three years

#### BVI total expense ratio (TER)

The total expense ratio was 0.95% p.a. The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets for a given fiscal year.

In addition, as it outperformed the defined benchmark, the fund incurred a performancebased fee of 4.09% calculated on the fund's average net assets.

|      | at the end of<br>the fiscal year EUR | value per<br>share EUR |

### **Report of the Réviseur d'Entreprises agréé**

KPMG issued an unqualified audit opinion for the full annual report of this SICAV (Société d'Investissement à Capital Variable). The translation of the report of the Réviseur d'Entreprises agréé (the independent auditor's opinion) is as follows:

To the Shareholders of FPM Funds SICAV.

We have audited the accompanying financial statements of FPM Funds SICAV and each of its sub-funds, which comprise the statement of net assets, the statement of investments in securities and other net assets as at December 31, 2010, and the statement of operations and the statement of changes in net assets for the year then ended, and a summary of significant accounting policies and other explanatory information.

#### Responsibility of the Board of Directors of the SICAV for the financial statements

The Board of Directors of the SICAV is responsible for the preparation and fair presentation of these financial statements in accordance with Luxembourg legal and regulatory requirements relating to the preparation of the financial statements, and for such internal control as the Board of Directors of the SICAV determines it necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

#### Responsibility of the Réviseur d'Entreprises agréé

Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with International Standards on Auditing as adopted for Luxembourg by the Commission de Surveillance du Secteur Financier. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the judgement of the Réviseur d'Entreprises agréé, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the Réviseur d'Entreprises agréé considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control.

An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by the Board of Directors of the SICAV, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

#### Opinion

In our opinion, the financial statements give a true and fair view of the financial position of FPM Funds SICAV and each of its sub-funds as of December 31, 2010, and of the results of its operations and changes in its net assets for the year then ended in accordance with Luxembourg legal and regulatory requirements relating to the preparation of the financial statements.

#### Other matter

Supplementary information included in the annual report has been reviewed in the context of our mandate but has not been subject to specific audit procedures carried out in accordance with the standards described above. Consequently, we express no opinion on such information. However, we have no observation to make concerning such information in the context of the financial statements taken as a whole.

Luxembourg, March 25, 2011
